## Pad Cleaning Module

**P**rint pads attract dust and debris due to the nature of the silicone material. Also, many types of substrate are subject to certain amounts of contaminants. Because of this, it is imperative to keep the printing pad clean to maintain high quality images. The AIS Pad Cleaning Module is an optional feature that is available for the PadMark 1000 and 2000 pad printers. Adapter plates are also available for using this option when docking two or more printers in series.

Pad cleaning should be part of any printing operation to ensure crisp, clean marks on every component. This innovative system is quickly programmed to add a cleaning cycle after a predetermined number of print cycles. The tape is then advanced and ready for the next cleaning cycle. The automatic pad cleaning option extends pad life and helps maintain consistent, high quality marks *without interrupting production.*

- Easy to retrofit in the field
- Uses standard packing tape
- Minimizes operator intervention
- Increases quality and productivity
- Increases transfer pad life
- Decreases ink contamination

**Every PadMark  
Accessory is  
Made in the USA**
